Zoology, Fergusson College (Autonomous), Pune affiliated to
University of Pune, Maharashtra*

Bhaskarjyoti Boro

*Ph.D. Research Scholar, Department of Anthropology,
Dibrugarh University, Dibrugarh*

1. Introduction

Ethno-medicinal practice in India has a long history. From the very ancient period medicinal plants and animals have been widely used to prevent many diseases. Traditional medicines are based on the beliefs and experiences of the indigenous people in the maintenance of their health and treatment of their physical and mental illness (Boro, 2022). Northeast India as one of the unique ecosystem represents the rich ethno-medicinal value. In the different plain and hill areas of the region found a good number of valuable flora and fauna which maintain the unique ecosystem of the region. Apart from that the North-eastern region is inhabited by different tribal
